Trade is a cornerstone concept in economics worldwide. This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research in advanced international trade. Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and these materials are supplemented in each chapter by theoretical and empirical exercises. Feenstra explores a wealth of material, such as the Ricardian and Heckscher-Ohlin models, extensions to many goods and factors, and the role of tariffs, quotas, and other trade policies. He examines imperfect competition, offshoring, political economy, multinationals, endogenous growth, the gravity equation, and the organization of the firm in international trade. Feenstra also includes a new chapter on monopolistic competition with heterogeneous firms, with many applications of that model. In addition to known results, the book looks at some particularly important unpublished results by various authors. Two appendices draw on index numbers and discrete choice models to describe methods applicable to research problems in international trade. Completely revised with the latest developments and brand new materials, *Advanced International Trade* is a classic textbook that will be used widely by students and practitioners of economics for a long time to come. Updated second edition of the essential graduate textbook, current approaches and a new chapter on monopolistic competition with heterogeneous firms. Supplementary materials in each chapter, theoretical and empirical exercises, two appendices describe methods for international trade research.

During the last century, international trade has become indispensable for many economies. This is not only the case for trade in primary raw materials and consumer products but also for secondary, recyclable materials. With the rapid growth of the recycling sector worldwide, trade in recyclables increased tremendously. It is striking that most of this trade flows from developed to developing countries. This book addresses the main causes of this typical trade pattern and investigates its economic

and environmental effects by carrying out case studies on waste paper imports in india waste plastics imports in china and used tyre trade in europe the book concludes by recommending policies that are aimed at preventing negative economic and environmental effects potentially resulting from trade in recyclables the book offers new ideas to researchers who are involved in international trade material flows and waste management and provides new insights for decision makers who are interested in wto and the basel convention
